

withstand the huge variance in temperature, especially the heat, and other potentially destructive weather like sandstorms," Mr. Sachin explained.

For specific and more security-sensitive areas, the Al Falaj Hotel uses the **DS-2CC193P-A High Definition Box Camera**. One such example is at the hotel's petroleum station. Mr. Sachin has deployed this Hikvision HD Box Camera in order to "make absolutely sure we are always able to immediately, and positively, identify license plate numbers at any time of the day or night; as well as the driver or passenger's face."

The Control Room

Each of these components is electronically tied into the main security room located inside

the hotel. This centralization allows security personnel to immediately access any of the above mentioned devices and respond to any potential situation.

The Al Falaj Hotel utilizes the **DS-8116HDI-S Standalone DVR** units to ensure enough space is always available for the hotel's sizeable recording needs. Additionally, each unit is connected to its own monitor and keyboard, thereby allowing separate security personnel to continually observe and respond in an independent, and efficient, manner.

Additionally, these DVRs are connected to a remote network that allows additional monitoring possibilities from the Security Manager's office, the General Manager's office and the Administrative Manager's office.

A Digital Future

While Mr. Sachin stresses that the current analog security solution utilized at the Al Falaj Hotel is more than adequate to achieve the challenges presented; he said the future of this hotel's security would be in HD.

In fact, this process is already happening in a piecemeal fashion: "Our existing analog system is very good, but HD simply offers better options such as higher quality resolution. While I do not see the total transformation from analog to HD within the coming year or so; I do see the Al Falaj Hotel taking further steps in this direction, especially with Hikvision digital cameras, and eventually replacing the entire analog surveillance system with a high definition network."

Matrix Comsec launches feature-rich COSEC Time-Attendance Terminals designed to meet the needs of modern businesses

Matrix Comsec is pleased to announce the launch of Biometric fingerprint and RFID card based time-attendance terminals. These feature-rich and cost-effective terminals are designed to meet the complete time-attendance needs of all growing businesses.

Matrix Time Attendance terminals hardware architecture offers the option to start as a small setup with a single door, which can easily scale along with the growing business. This versatile solution comes with web-based management software that can monitor and control up to 10,000 doors and 1,00,0000 users in real-time from a single place. Software modules such as Time Attendance, Leave Management and Employee Self Service help to manage all business needs within a single solution and ensure continuous rise in productivity.

On the occasion, Jatin Desai, Product Manager Matrix Comsec, said, "Matrix COSEC time attendance terminals are full-fledged time attendance solution with world-class hardware design and advance software features. We have designed these terminals keeping in mind the requirements of the large segment where only time attendance is essential. COSEC web based time-attendance software comes with advanced features like flexible attendance policy, 100+ reports generations, third party software integration, centralized management for HR that eliminates the need for any customization. Thus Matrix COSEC attendance terminals with their versatility, intelligence and integration will meet the present and future time-attendance needs of growing businesses."

Hardware Features

- Fingerprint and Proximity Cards
- Easy Operations from Keypad
- Ethernet Connectivity
- Touchsense Keypad
- Dot Matrix LCD
- USB Port for Data Transfer
- 50000 Events Storage

Software Features :

- Flexible Time-Attendance Policies
- Shifts and Schedule Management
- SMS and Email Notification
- Leave Management
- Employee Portal
- 100+ Reports and Colorful Charts
- Integration with Tally and Payroll
- Integration with SAP, ERP and Active Directory

With above unique attributes of the product, our expectations from the market are ambitious. This is a product which will create an excitement among the partners. They will experience a truly valued product, with a basket full of features available at competitive price. After having received an encouraging response from the distributors, system-integrators and end-customers for our access control and time attendance product we expect a similar kind of response for this time attendance terminals. Thus Matrix COSEC time attendance terminals promise to be a real valued product to meet the present and future security needs of small to large businesses.
