

Matrix Launches COSEC ARC: IP based Access Control Panel with PoE

INNOVATION

Matrix COSEC is a comprehensive and flexible access control solution designed to meet access control needs of any organization irrespective of its size, locations, layouts and timings.

Matrix COSEC allows controlling access on all three simultaneous dimensions – user, zone and time by answering the three fundamental questions about who, where and when. All modern organizations need to protect their physical and IP assets and ensure human safety by controlling movement of people as per predefined policies.

COSEC ARC is an intelligent compact IP panel with PoE for a single door. ARC dramatically simplifies access deployment and enhance security in multifold. It works in two

modes – standalone with COSEC PANEL or centralized with COSEC CENTRA application server. The state-of-the-art COSEC ARC can control 2 readers on wiegand or RS-485, door lock and other auxiliary devices making it an ideal solution for any access control installation.

Key Benefits:

Scalable: Matrix Access Control is scalable in the smallest factor of one door controller. It is scalable up to 255 devices with COSEC PANEL LITE or 65,000 devices with COSEC CENTRA server without worrying on

future investment.

Flexible: Matrix access control architecture offers flexibility to install door controller near the door to reduce excessive and complex wiring compare to traditional access control installation.

Cost Effective: COSEC door controllers can be directly connected with the COSEC PANEL LITE. COSEC PANEL LITE manages 255 devices and 25,000 users directly without any server installation.

Highly Secure: Matrix offers biometric readers with

fingerprint and palm vein readers along with high-end access control features. This ensure foolproof security compared to traditional RFID card based access control solution with basic access control features.

Reliable: COSEC Access Control solution is a single door and distributed architecture with standard IP wiring that ensures continuous and reliable access control without any security breach.

“Matrix has a rich innovation lineage. The company has acquired a formidable reputation for quality and engineering of its products. In line with our legacy of introducing new innovations, we are presenting two new security solutions designed and engineered keeping in mind the needs of enterprises. These solutions with their value added functionalities will surely strengthen the security cover of enterprises. These solutions have already gained interest of system integrators and consultants offering technology solutions for large projects and enterprises. We are launching these solutions in seven cities across India”.

Ganesh Jivani
Managing Director, Matrix Comsec

The 4-fold safety of automation

The new control system PNOZmulti 2 with up to 80% less energy consumption ...

PILZ
THE SPIRIT OF SAFETY

... than comparable products. The power consumption of the new base unit PNOZ m B0 is a minimal 0.8 W with 20 safe inputs and 4 safe semiconductor outputs (PL e, SIL CL 3) and a width of just 45 mm. Rely on 10 years of innovation from the market leader in safe control technology! Count on the configurable control systems, the worldwide safety standard for all machine types. The simple, graphics configuration tool saves engineering costs because you can create your safety circuit simply and intuitively on the PC. Visit us at the Hannover Messe, Hall 9, Stand D17.
