

Matrix to Showcase its Comprehensive Range of Security Solutions at Intersec Dubai 2015

Matrix Comsec, a manufacturer of enterprise grade security and telecom solutions is participating at Intersec Dubai. Matrix will showcase its complete portfolio of security products encompassing range of access control, time-attendance, and video surveillance solutions suitable for enterprise application. These solutions have key advantages like superior technology, better quality and performance as well as improves the security and productivity of your organization.

During Intersec, Matrix will launch its cutting edge access control panel and readers to enhance security in the organization. COSEC ARC is a unique IP-based access control panel having multiple benefits over conventional access control panel. Being PoE based, it eliminates complex wiring and local power requirements. Its din rail and wall mount option gives flexibility to mount even where the space is a constraint. "During this exhibition, we will

demonstrate our enterprise grade time-attendance solution with real-time features such as auto push events to server, instant notification, automatic device identification, scheduler service for report and backup and many more. These features certainly reduces all manual works of HR and helps them to achieve better results in terms of productivity and cost reduction," said Jatin Desai, Product Manager of Access Control and Time-Attendance Solutions.

NI Trend Watch 2015 Explores Internet of Things Impact

NI, the provider of solutions that enable engineers and scientists to solve the world's greatest engineering challenges, announced the release of NI Trend Watch 2015. The second annual report examines a range of topics—from the industrialization of the Internet of Things (IoT) to the growth impact of the maker movement.

"NI knows that future systems will be based on architectures and technologies that may not even exist yet," said Eric Starkloff, NI executive vice president of global sales and marketing. "We're investigating these trends because we're committed to providing a flexible platform that can incorporate new technologies so that you can build systems to meet your future needs."

According to Jayaram Pillai, Managing Director, National Instruments-India, Russia & Arabia, "IoT promises to revolutionize the engineering world. We see Graphical system design platform playing a significant role in enabling the industrial IoT."

NI Trend Watch 2015 covers trends in these areas:

5G: The Internet for Everyone and Everything: The mobile Internet encourages innovation and inspires researchers to think beyond faster data and greater capacity. New networks, referred to as 5G, may unleash enormous economic potential.

When Exposed to IoT, Big Iron ATE Will Rust: For the testing challenges of tomorrow, traditional automated test equipment (ATE) falls short. Test engineers need smart ATE for the smart devices of the IoT.

The Industrial IoT (IIoT): The IIoT is a vast number of connected industrial systems that are communicating and coordinating their data analytics and actions to improve industrial performance and benefit society as a whole.

The Impact of the Maker Movement: The Internet is fueling a massive maker community. As the maker movement continues to grow, it is important to assess the impact it will have on innovation, economic growth and future generations.
