Mr. Bhatia holds an MBA from Mumbai University, in addition to completion of executive programs from Wharton and INSEAD. He lives in Silicon Valley, California.

Matrix Launches SARVAM UCS For Modern Enterprises

Matrix announced the launch of SARVAM Unified Server Communications for enterprise. Matrix SARVAM UCS is a powerful communication solution that provides enterprises with integrated mobility and unified messaging which help enterprises improve collaboration among all employees, irrespective of its size and geographic location. With business application for Android, iOS and Windows PC, employees can use their own device (smartphones/tablets) for personal and professional purposes, no matter where they are, in the office or working remotely. Businesses can also benefit by eliminating the cost of business-owned devices. Matrix SARVAM UCS, with its advanced call capabilities and comprehensive features ensures that enterprises (BFSI, Manufacturing, Corporates, Call Centres, etc.), hospitals and hotels-motels are more agile, alert and aptly empowered to do more.

Furthermore, it has interface with

all-pervasive legacy and new-generation wireless telecom networks like POTS, ISDN, T1/E1, GSM/3G and VOIP for the obvious benefits of protecting the existing investment and facilitating during natural migration to the new-age IP infrastructure. Matrix SARVAM is designed for interoperability, to help enterprises evolve from what they have got today, with the agility that is required to address tomorrow's communication requirements.

SARVAM UCS is a revolutionary step in technology as it is focused on Mobility, Collaboration, Versatility and Reliability. With Unified Communications and IP at its Core, Matrix SARVAM UCS can now set new benchmarks and transform the way enterprises communicate, collaborate and serve their customers. With this simple, powerful and UC solution, we look forward to cater current and future requirements of modern enterprises.

Konica Minolta Bags BLI Pick Awards in the A3 MFP Category

Buyers Laboratory LLC (BLI) announced the winners of its coveted Pick awards for the summer 2016 season, with Konica Minolta earning accolades for its outstanding A3 Multifunctional printers (MFP) bizhub C308 and bizhub 227. The MFP's stood out for reliability, efficiency-enhancing capabilities and was honoured for "productivity". As an independent company evaluating office document equipment and applications, BLI has been putting products to the test for more than 50 years. By assessing reliability, image quality, ease of use, productivity and a range of other criteria, the tests reveal the products that deliver customers the best value and most trouble-free performance. BLI Pick awards are presented twice annually.

"We are honoured and grateful to receive this award, and are ever committed to provide powerful and sustainable solutions to our elite customers in the coming years. This accolade further supports the leading innovation and proven performance over the peers" said Mr. Yuji Nakata, MD Konica Minolta Business Solutions India Pvt. Ltd.

Zebra Technologies Shares Vision for Next Wave of Industrial Age

Eighteen months after its acquisition of Motorola Solutions Enterprise business, Zebra Technologies Corporation shares its vision for the company moving forward within a growing industry category, Enterprise Asset Intelligence (EAI). By providing "Visibility That's Visionary", Zebra increases businesses' ability to track critical assets within their operations and know exactly what they are, where they are, and their condition so they can make smarter, faster decisions that improve their bottom line. Zebra showcased a suite of products ahead of the 6th India Warehousing Show held at Pragati Maidan from June 8-10. The evolution of the AIDC market to a more strategically oriented EAI focus is being driven by technology trends: IoT, cloud-based data analytics, and mobility. Zebra is leading this evolution through its operational framework of "sense, analyze, and act." Its solutions automatically "sense" information from enterprise assets, including packages moving through a supply chain, equipment in a factory, workers in a warehouse, and shoppers in a store. Operational data from these assets, including status, location, utilization, or preferences, is then "analyzed"

to provide actionable insights. And with mobility, these insights can be "acted" upon to drive better, more timely decisions by users anywhere and anytime.

Deep Agarwal, Regional Sales Director, India, Zebra Technologies, says, "We are moving into a new era of business in which connectivity is instrumental. Enterprises are seeking technologies that can add value to their operations, and we recognize the changing needs of our customers and channel partners. Today, we are extremely excited to be unveiling the next wave of products that would drive growth in the Enterprise Asset Intelligence ecosystem. With Zebra's focus on offering 'visibility that's visionary', we will enable our customers in India to harness IoT, cloud, and mobility to gain actionable insights into their most important assets and people – increasing productivity, customer satisfaction, and their bottom lines. At the same time, our new PartnerConnect channel program will help our partners meet the demands of their customers and ultimately grow their own brands and businesses. It is an exciting time for us at Zebra."

ZyXEL UAG Series to Boost Public Internet Access

Providing Internet access in hospitality venues is not the same as in homes or offices. Consumers today are accustomed to anywhere, anytime and always-on connectivity and expect the same from the hospitality venues they visit, making access management and bandwidth abuse exceptionally challenging and inconvenient. To address this issue, ZyXEL offers comprehensive Unified Access Gateway (UAG) portfolio to help hospitality business.

The ZyXEL UAG Series offers a high-performance access gateway, designed to manage guest access and generate revenue in public Internet access networks. It facilitates compliance with data retention laws, and ensures high-quality, on-the-go online Internet access with dual-WAN and per account bandwidth management capabilities. The new gateways reduce hardware expenditure for BYOD deployments with a WLAN controller (built-in) and helps businesses manage network access authentication, provide secure network access to hundreds of users, and generate revenue with Internet services.

GameXS Announces PlayX Gaming Tournaments

GameXS have launched a gaming tournaments app PlayX where gamers can compete in daily/weekly online tournaments as well as head-to-head challenges in games like FIFA, CS: GO, DOTA 2, Clash Royale and many more from their own consoles/ devices.
