

Check Point in Leaders Quadrant

Check Point Software has been positioned in the leaders' quadrant for Gartner's recently published Magic Quadrant for Enterprise Network Firewall1. Check Point has been in the leader's quadrant for 16 consecutive years.

Gartner defines leaders in the Enterprise Network Firewall Magic Quadrant as "containing a mix of large and midsize vendors, with the common element of making products that are built for enterprise requirements. These requirements include a wide range of models, support for virtualization and virtual LANs, and a management and reporting capability that is designed for complex and high-volume environments, such as multitier administration and rules/policy minimization.

An NGFW capability is an important element as enterprises move away from having dedicated IPS appliances at their perimeter and remote locations.

TP-LINK UNVEILS 300MBPS ADSL2+ MODEM ROUTER

TP-LINK has launched TD-W8968 300Mbps Wireless N USB ADSL2+ Modem Router in India. The 3-in-1 device combines the functions of a DSL modem, an NAT router and a wireless access point. With 4 LAN ports, it provides users to access and share Internet connections wirelessly at speeds of up to 300Mbps, allowing for seamless use of bandwidth-sensitive applications such as HD Video streaming, online gaming and Internet calls.

The device supports various Internet access methods: ADSL, 3G using the versatile USB port or Ethernet WAN (EWAN) connection using the interchangeable LAN/WAN port. It gives users the freedom to choose Internet connection from ADSL, VDSL/Cable/Fiber modems and 3G modems.

The company said that with the TL-W8968's multi-functional USB 2.0 port, users can share printers, files or play media throughout the network at home with several different computers, using the device's FTP server functions.

Matrix IP-PBX and Grandstream IP Phones are now Interoperable

Matrix Comsec and Grandstream networks have completed interoperability between Matrix NAVAN and ETERNITY range of IP-PBXs and Grandstream cordless DP715/710 IP-DECT phones.

The interoperability of Matrix IP phone systems with Grandstream cordless IP-DECT phones provides freedom to roam anywhere inside the office and still be reachable to co-workers.

Grandstream DP715/710 cordless IP-DECT phones offer industry's best wireless VoIP solutions with excellent voice quality, affordability and wide indoor/outdoor radio coverage for mobile communications. The plug-n-play installation and wire-free operation eliminates the need for physical wiring on user desks. With tight integration of Matrix NAVAN CNX200 and ETERNITY IP-PBX features, Grandstream IP-DECT users can connect as cordless extension of the system and access range of call management features of IP-PBX systems such as call pick-up, transfer, forward, conference, voice mail and many more while working from anywhere inside the office building, campus or cafeteria.

Aditya Infotech Empowers Channel Partners and SIs

Aditya Infotech Ltd. (AIL) has joined hands with Dahua Technology, professional manufacturer in the security and surveillance field for empowering and equipping channel partners and system integrators with knowledge on Dahua's new technology and latest product categories as part of "Dahua Technology Show" programme.

AIL and Dahua initiated these technology road shows in 5 major cities including Chennai, Bangaluru, Kolkata, Ludhiana and Ahmadabad, across India wherein Channel Partners and System Integrators came from different spectrum of the surveillance domain.

Emerson Network Measures the Speed of Mobile Revolution

Emerson Network Power has released an infographic that illustrates how rapidly convergence is happening and what it means for consumers and providers. The advent of the smart phone has fundamentally changed the way consumer's access information. In 2007, before the introduction of the smart phone, consumers purchased almost 300 million PCs. In 2011, that number was 350 million. In 2007, about 1.1 billion people accessed the internet from PCs and about 400 million from mobile devices.

AOC Unveils 27" LED Display System

AOC has introduced i2757Fh 27inch IPS LED Monitor which comes with 2 HDMI Ports for multi-connectivity with gadgets like play station, DVD Players, Set top boxes etc. The monitor offers a maximum resolution of 1920 x 1080 and comes with 16:9 aspect ratios and 20,000,000:1 contrast ratio.

The company informed that the i2757 breaks the norm of standard LED monitors that offer a viewing angle of 170° / 160°; this monitor offers a viewing angle of 178° / 178°, which provide wide viewing angle both horizontally and vertically.
